

MOTION BY MAYOR MICHAEL D. ANTONOVICH

JANUARY 31, 2006

Recent reports have documented that traces of prescription drugs have been found in drinking water stored beneath the San Gabriel Valley. While the Sanitation Districts reports that the water is pure enough to drink, the findings highlight the need to address the way that prescription drugs get into our water.

I, THEREFORE, MOVE that the Board direct the Department of Public Works, Public Health Officer, and the Sanitation Districts to develop and implement a program to educate the public regarding the dangers associated with disposing of unused prescription drugs and the proper methods for disposal, and to report back on what purification methods can be implemented.
